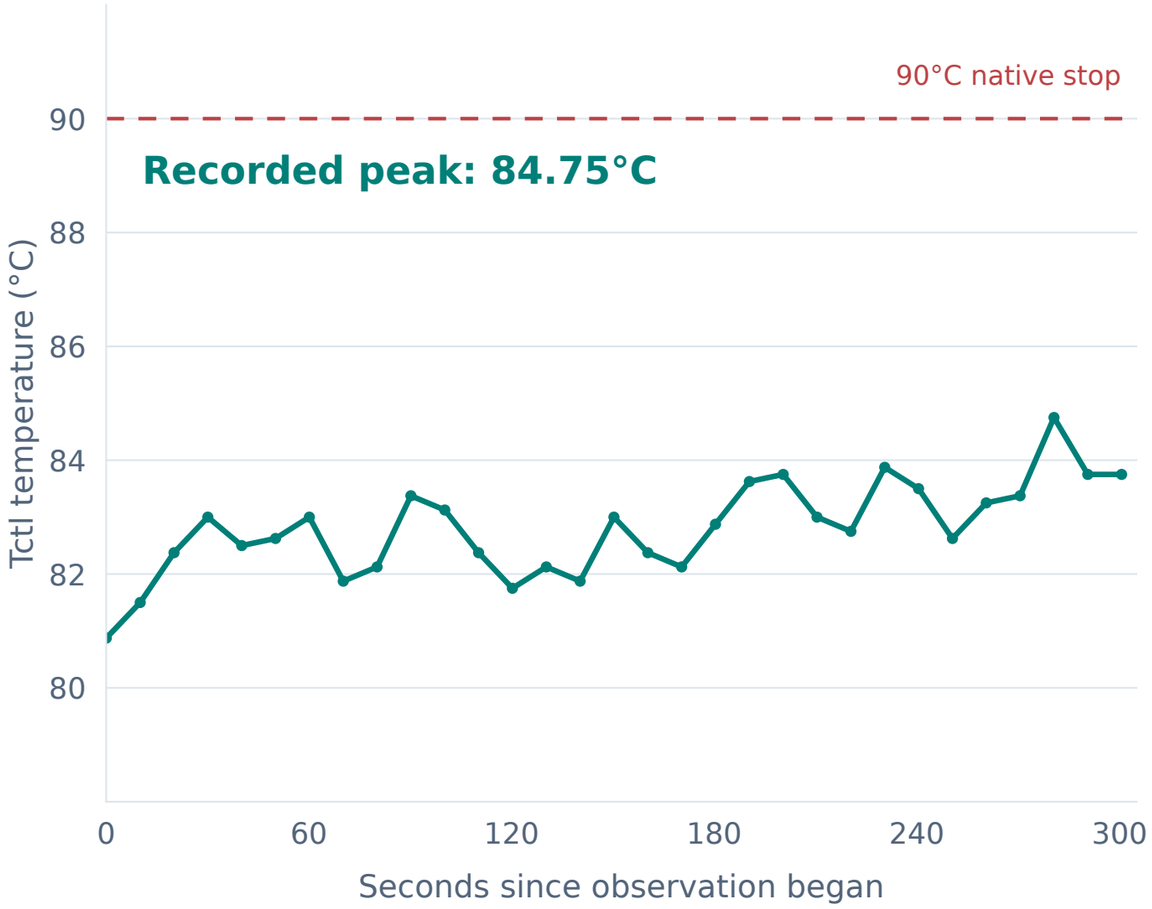
15 Hz browser assessment: temperature checks

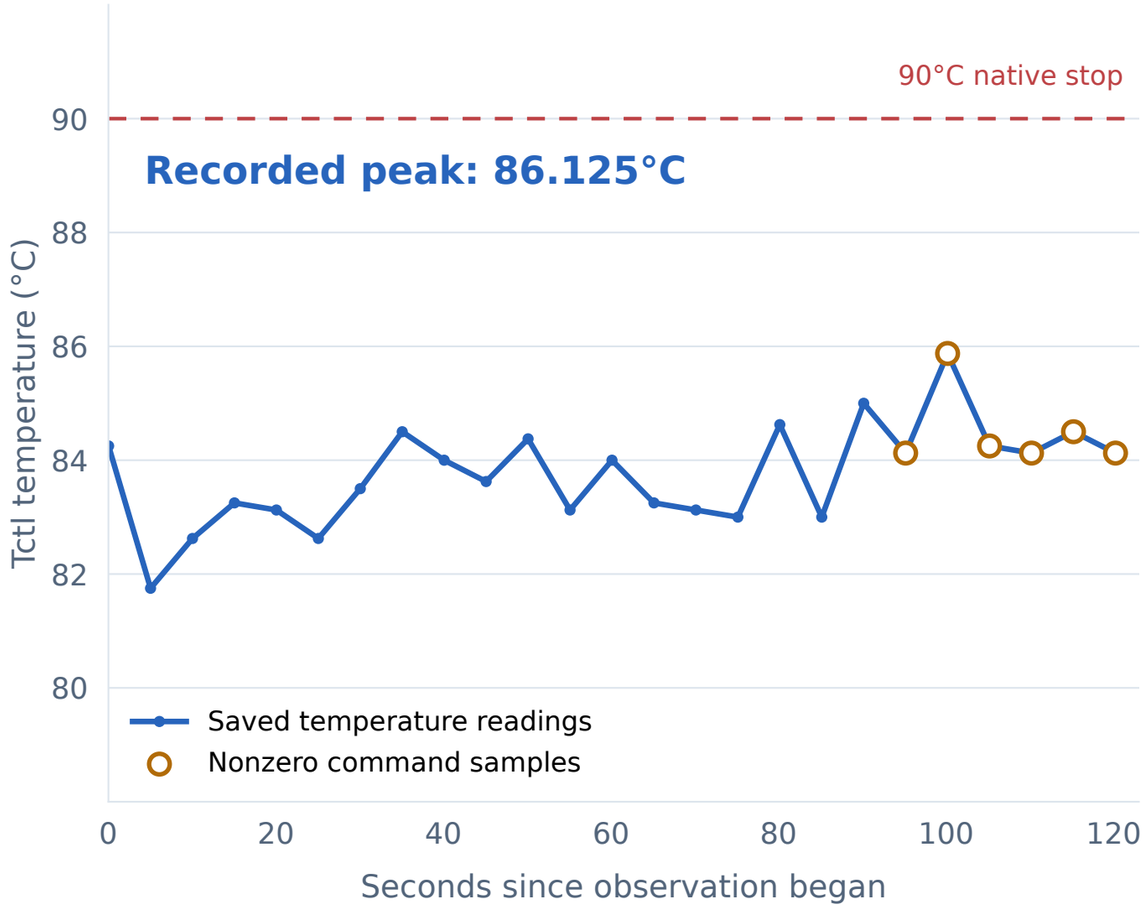
Measured AMD Tctl • November 8, 2026 (America/Chicago) • new epoch-22 NPU detector

Stationary mapping · 5 minutes



31 / 31 camera and localization samples healthy

Driving check · 2-minute observation



25 / 25 camera and localization samples healthy

Left: readings about every 10 s. Right: saved status snapshots about every 5 s; 86.125°C peak comes from the 1 s monitor receipt.

Motion was observed in six snapshots near the end of the right-hand window. These bounded checks do not establish endurance stability.
